To whom it may concern,

In relation to CSA certification of the Pressure Sensor Model A-10, WIKA:

> WIKA can confirm the materials and production process used for the cULus rated sensor at -30C - +100C temperature ranges are the same that are used for the CSA rated sensor at -40C - +100C unit but WIKA has not officially submitted this sensor configuration to UL for certification at -40C and cannot provide the UL marking on the unit for the -40C temperature range.
>
> Usage of the sensor at the -40C temperature range that is outside of the CSA certification requirements cannot be guaranteed and need to be confirmed to be acceptable based on specific application conditions.

Kind regards,

Chad Reinhard
